Flue Guard's

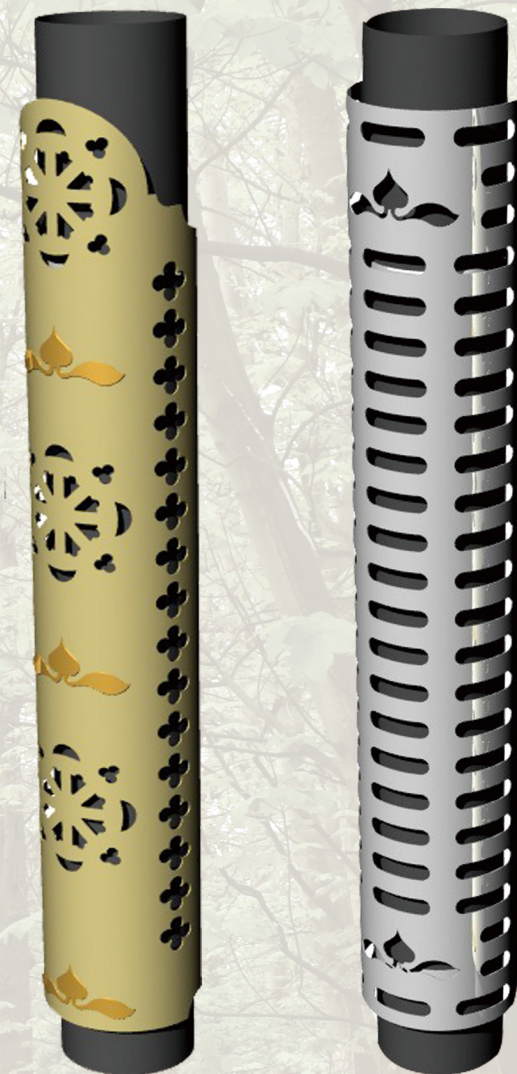

Imagineering...

Flue Guards come in a range of colours and finishes as detailed in the table below. They can be easily retro-fitted to the flue pipe. The colour painted guards can be supplied with either brass or bright flower decorations. Standard length is 750mm tall x 100mm (4ins) dia.

They are designed to fit onto a 100mm (4 ins) diameter flue pipe although other diameters and lengths can be specially manufactured to order.

They are fastened to the flue pipe via 2 large Jubilee Clips which allows the guard to be positioned as required for maximum effect.

They can be used to protect combustible materials from exposure to excessive radiated heat or as a form of protection from accidental touching of the flue pipe.

DESC	COLOUR	PT NO	EXC VAT
