YOUR NEW FLAME

Enjoying the heat from a perfect flame behind the stoves glass is the ultimate form of relaxation and enjoyment.

Our design process focuses on creating extremely beautiful images of the flame so you always get the best view

INNOVATION AND DESIGN

Ever since the company was founded in Odense in 1978, we at Scan have focused on offering our customers the best wood-burning stoves on the market, paying particular attention to design, innovation, and user-friendliness. For us it is not just about warmth but about delivering a perfect flame, enclosed in a design-conscious piece of furniture to suit the majority of homes. The combination of Danish design, brave ideas, and an eye for detail has turned Scan into a leading brand in wood-burning stoves.

DANSISH DESIGN

FUNCTIONAL INNOVATION

For Scan, heating is more than just a practical or aesthetic matter. We see our stoves as innovative pieces of furniture that suit a modern lifestyle.

Through creativity, an eye for detail and the courage to try out new ideas we have pushed ahead and shown the way both in terms of user-friendliness and the environment. Scan was the first to introduce sliding doors, glass with a 90 degree angle, and glass handles for inserts.

Denmark has a rich design tradition, which Scan is part of. We exclusively use Danish designers to create our stoves, thus ensuring totality and the right expression. Consequently, you can always recognise Scan by the clean lines, which are typical of good Danish design.

We also have a tradition of setting new standards, and our designers approach every challenge with the aim of creating something new. This has meant that Scan has constantly gained international recognition, and we have won several design awards for our workmanship.

At Scan we are focused on the details and put our soul into even the smallest things. With our critical eye and constant search for perfection, we have created revolutionary forms and technical solutions for the benefit of our customers.

By integrating the handles in the design and ensuring easy operation, we have combined form and function. This is one of many examples of what we call a "smooth finish".

CUSTOMISABLE AND UNIQUE

Create your wood stove with a number of opportunities. Personalize your Scan 1003 to match your interior, desires and needs with the various modules. This designer wood stove combines and fulfills both aesthetics and practicality. The module boxes are intended for the storage of your logs, but can also be used for decorative elements such as frames, books or other objects.

SCAN 41

STYLISH DANISH DESIGN

We have designed a minimalist stove with a cool handle. The design fits into several types of interiors. The stove is available with or without side glass, allowing you to choose even better visibility of the flames.

Scan 41 is easy to open, even when you're carrying a pile of logs. The vertical handle is the sophisticated detail of Scan 41. The stove is user-friendly with an ash-solution.

Scan 41 extends only 42 cm from the combustible wall and is therefore easy to place in the room.

Scan 41-1 is available in black paint and with glass front door.

Space for firewood in the base.

Scan 41-2 is available in black paint and with glass front door and side glasses.

SCAN 65

FUNCTIONAL WOODSTOVES

Scan 65 with steel sides is available with or without side windows. A soap stone top can be added as an extra accessory. If you want a higher stove, you can buy an 80 mm steel base for this model.

The door has an elegant handle and a smart soft-close function.

Soft-close makes the door close gently, quietly and safely. On the more practical side; Scan 65 can be placed only 5 cm from the combustible wall, has an ash solution and a storage space behind the door in the shelf.

SCAN 65-SERIES

SCAN 66-SERIES

SCAN 66

INNOVATIVE DETAILS

The Scan 66 series has been given a wonderful organic shape that creates a playful and beautiful frame around the fire. This is a wood burning stove that really attracts attention. The shape of the combustion chamber means that this stove has a great flame appearance. Ashtray is included.

The Scan 66 series has been given several crystal clear design details; a unique log guard in glass, which maximizes the visibility of the beautiful flames.

The handle and air valves are made of tempered glass which is beautifully curved and comfortable to touch.

Scan 66 is available with different bases - each with its own unique expression.

All models in black paint - Scan 66-1 and Scan 66-4 are also available in white paint.

Scan 66-4 has a square base. Here in white paint.

SCAN 66-1

FLAMES ARE NOT SQUARE

Soon after its launch Scan 66-1 was nicknamed the “egg” taking its inspiration from nature. The wood stove's organic shape embraces the flames in a beautiful and holistic way. When you hang it on the wall, the design gets maximum space and is highlighted as a natural work of art.

Scan 66-1 has several innovative glass details. The most striking is the log stopper, which is made of clear glass to maximize the visibility of the flames.

The handle and air valves are in ceramic, sandblasted glass. The wood-burning stove has an ash drawer and comes in beautiful white or black lacquer, the choice is yours.

ENVIRONMENTALLY FRIENDLY HEAT IN FOCUS

Scan has a goal of developing wood-burning stoves that burn cleaner and more sparingly than any other.

We are constantly working to increase the efficiency of combustion and to meet the strictest international requirements. We are therefore very proud to be one of the wood stove manufacturers that has achieved the most approvals worldwide.

CLEAN BURN

This means that the fireplace has a dual combustion system that converts up to 90% of the gases and particles in smoke to heat. This provides the absolute minimum level of smoke emission because the fireplace uses the energy to give heat instead of smoke.

CLOSED COMBUSTION

Products with closed combustion system takes air through a separate air channel directly from the combustion chamber and through an outside wall or through the floor.

40 % LESS WOOD

Modern wood stoves have 40% more efficient combustion and 90% less emissions than old fireplaces.

ENERGY LABELLING

The Ecodesign and Ecolabelling Directive are two instruments initiated by the EU. They aim to reduce the environmental impact of energy-related products throughout the life cycle. This makes it possible to choose the most energy efficient wood stove on the market.

Labelling our products with energy efficiency class helps you choose the most energy efficient wood stove, with the lowest operating cost and impact on the environment. This is so that you can make your best choice for the present, the future and the environment.

EXTRA HEAT STORAGE

The unique Heat storage system allows the heat to continue for up to 12 hours after the last load of firewood.

Scan's heat storage system is a combination of materials and a technical design that ensures maximum heat effect long after the fire has been extinguished.

The heat storage system is compact and hidden in the top of the wood burning stove. The heat accumulating material captures the heat produced in the combustion chamber. Firing with an open valve provides fast heating. When the valve is closed, the heat is stored and the heat dissipation is extended by up to 12 hours.

SCAN 68-SERIES

SCAN 68

ELLIPTICAL SHAPED

The organic elliptical shape is a hallmark of the Scan 68 series. This is one of our really big product families. Simply explained - around the beautifully shaped combustion chamber we have created a variety of bases where you are guaranteed to find a favorite that suits you.

You can choose between a column, open or closed plinth in either black or white paint. Choose black or glossy aluminum on handles and trim. All models have ash drawers. Air control handles are located on the side of the stove.

Scans 68-13 and 14 are available in black or white paint. Choose trims and handles in black or glossy aluminum.

Detail from the top of the stove.

Scans 68-3 and 4 are available in black or white paint. Choose trims and handles in black or glossy aluminum.

SCAN 68-SERIES

The perfect proportions, straight lines and the combination of glass and aluminum emphasize the Danish design origin. The design is made with respect for both the aesthetic and the practical role that the wood burning stove has in your home. The integrated handle makes operation as easy as the design is simple.

SCAN 68 WALL

A PIECE OF JEWELLERY ON THE WALL

Here we let the designers speak for themselves:

"As for this, we wanted to design a wall-mounted stove, at the same time as it should be suitable for smaller rooms.

The organic elliptical shape is related to the human body, and by using this design element, the stove appears as a whole, and gives a perfect expression. The result is a wood burning stove which is designed as a decoration for the wall."

Scan 68 wall is available in black or white paint and ash drawer is standard.

Scan 68-2 has access to the fire in the front, aluminum trims and is delivered in black or white paint.

SCAN 80-SERIES

SCAN 80

BEAUTIFUL PRISM SHAPE

Scan 80 has a beautiful prism shape that gives 180° visibility to the flames. In the Danish design tradition, much of the design lies in the detail, and Scan 80 has the handle elegantly "hidden" between the glass and the base.

Scan 80-3 and 4 are the tall models in the series. An ingenious solution is that you can hide the flue pipe in the High Top module on the corner model, and you get a clean design without any disturbing elements. The high top can also be used for heat-storing stones, which give off heat up to 12 hours after the last log has been placed on the fire.

Models available with a closed base in white paint, while the variant with a door in the base is only available in black lacquer. All models are equipped with an ashtray.

Scan 80-1 has a closed base and is available in black or white paint.

SCAN 83

EVERYTHING IS IN THE DETAIL

The gorgeous design behind Scan 83 puts the beautiful flames in focus and gives you the opportunity to create your own style around the natural gathering point. Every detail is well thought out; the rounded glass door provides a beautiful view of the flames and has a quiet soft-close function. The handle is positioned so that the simple design is perfect and the temperature is always kept cool. The firebed is deep and provides plenty of space for the wood and you avoid ash spills. In addition, the wood-burning stove has a practical ash drawer with a lock that provides extra safety.

Traction adjustment is placed discreetly next to the handle.

SCAN 83-SERIES

SCAN 84-SERIES

SCAN 84 - NEW PRODUCT

HEAT WITH A PERSONAL TOUCH

The Scan 84 series has clean lines and an almost architectural design – playful, yet discreet. The series consists of 4 models, where the variations are the choice between two different heights and a door in either exquisite black glass or steel surface. The door has a soft-close function that ensures that it closes softly and quietly. A decorative top plate for the stove (accessory) can compliment the steel to provide either an elegant black glass or soapstone final touch.

Scan 84 Modern has an exclusive glass front and is available in black, grey or white paint.

The handle in solid oak stays cool during firing.

Scan 84 Classic Maxi has a glass door with a steel front and is available in black or grey paint.

This series has several possibilities for additional details to raise design and function one more level; The stove can be mounted on a rotating base, so you can rotate the whole stove and enjoy the fire from your favorite spot in the room. The tall variants in the series, Scan 84-3 and 4, can be equipped with heat retaining stones hidden the top. These provide extra heat for up to 12 hours after the last log has been placed.

SCAN 84-SERIES

The minimum distance to combustibile material is only 45 cm to the side and 10 cm to the back.

SCAN 87

LIKE WALKING INTO A WARM EMBRACE

'Sometimes you want go all in!' Scan 87 is a large stove that gives you lots of heat, a heavy and solid impression and becomes the natural focus of the room. The series consists of two variants; Scan 87-1 which stands as a solid monolith on the floor and the wall-mounted Scan 87-2 where the flames appear to almost float picturesquely.

The gaze is naturally drawn to the eye-catching glass guillotine door that presents the flames in a bright combustion chamber with 160 degree vision. The distinct, curved joints in the construction and the smoke coloured glass details; with the cool glass handle and the rounded ash lip, offer design and functionality fused together.

BEFORE BUYING A WOOD STOVE

BEFORE BUYING A WOOD STOVE

For most of us, a wood-burning stove is a big investment that we want to last for many years. It is therefore important to check out the conditions in your home before deciding.

SAFETY

Our approvals are your guarantee that your wood-burning stove has been thoroughly tested and checked. All products are tested in terms of safety and function. We therefore automatically give a 5-year warranty(excluding consumable items) right to claim. Selected authorised Scan dealers are available with further technical information regarding installation and service etc. See also www.scan-stoves.co.uk

INFORMATION ON INSTALLATION

To avoid installing the stove incorrectly and to ensure correct use, it is important to follow the assembly and instructions manual carefully.

We recommend that the installation is performed by an authorised Scan fitter to ensure optimum function and safety of the installation.

Information on Scan dealers can be found at www.scan-stoves.co.uk.

As the house owner you are responsible for ensuring that installation and fitting are carried

out in accordance with national and local building regulations as well as the information provided in the assembly and instructions manual.

The installation must be carried out by a HETAS engineer or signed off through your local building control inspector.

As the house owner you must register the installation of a new fireplace with your local building authorities (always respect the national rules in your country).

APPROVAL

A wood-burning stove must be safe when in use, easy to operate and protect the environment.

It is therefore a good idea if the stove does not just meet the national standards and requirements, but surpasses them.

QUALITY

All Scan stoves are characterised by their high quality and are produced from the best possible materials. We conduct a thorough goods inwards inspection of raw materials

and final inspection of the product. Via a registration number, it is possible to trace the origin of the stove which makes ordering spare parts easier.

Unique details such as a cool handle, efficient air wash and simple operation are quality features - and make lighting and stoking much easier.

SIZE

It is important to get a stove that is proportioned for the area it has to heat.

CLEARANCE

Take note of the applicable regulations regarding clearances to combustible material and the correct floor covering.

The authorised Scan dealer will be happy to advise you on the regulations.
